Version 2.1 adds one new variable: govpolicies_assist. This variable is a subtask of govcap_assist and identifies missions with mandates to help implement government policies, usually through the provision of logistical or technical support.

The following variables have been updated to reflect the addition of this new variable:
- subtasks (which counts the number of second- and third-order tasks)
- totaltasks (which counts the number of total tasks (= numtasks + subtasks))
- pkratio (the ratio of tasks related to conventional peacekeeping)
- pbratio (the ratio of ratio of tasks related to peacebuilding)
- vlimratio (the ratio of tasks related to ending or mitigating ongoing violence)
